Professional Summary

Software engineer with 4+ years building and shipping full-stack production systems in Ruby on Rails, Vue.js, and MongoDB, including LLM-powered features from integration through production rollout. Backed by a decade in technical support and systems, giving me unusually deep product, debugging, and customer insight. I own features end-to-end — architecture, test coverage, deployment, and the messy production realities most engineers only see secondhand.

Professional Experience

CipherHealth, Remote, New York City, NY

Software Engineer

August 2024 - Present

- Architect and maintain scalable, production-grade code backed by comprehensive test coverage to ensure long-term reliability.
- Build and maintain full-stack features across the entire application layer using Ruby on Rails, MongoDB, and Vue.js
- Develop and ship LLM-powered features end-to-end, from model integration and prompt engineering to production rollout, enhancing product capabilities with AI-driven functionality
- Own and operate CI/CD smoke test suites supporting integration validation across deployment pipelines.
- Optimize MongoDB queries and data retrieval strategies, improving application performance and response efficiency.
- Drive bug fix initiatives end-to-end. From defect identification to resolution, reducing friction and elevating the overall user experience.
- Deploy and manage containerized services using Docker and Kubernetes, supporting scalable and consistent environments across development and production

Senior Technical Support Engineer

July 2022 - August 2024

- Serve as an escalation point for complex technical issues, interfacing between customer support teams and developers.
- Conduct regression testing, bug fixes, unit tests, and develop documentation to guide configuration improvements.

- Utilize Ruby on Rails, JavaScript, and MongoDB to enhance application performance and resolve defects.
- Database querying to provide impact analysis of bugs and incidents.
- Construct Rails migrations for mass bug fixes, requiring extensive efficiency.
- Collaborate on Pull Requests, conduct code reviews, and provide feedback to optimize development processes.

Cloudflare, Remote, Austin, TX

Technical Support Engineer

August 2021 - July 2022

- Resolved customer issues related to networking, DNS, CDN, and serverless infrastructures using JavaScript and Rust (Cloudflare *Workers*).
- Maintain and establish great internal documentation to streamline shared knowledge.
- Analyzed traffic data using Elasticsearch and Grafana, improving system responses and client network operations.
- Developed custom Bash scripts and tools, enhancing troubleshooting capabilities and customer support quality.

Ochiltree General Hospital, Perryton, TX

Computer Information Systems Technician

October 2017 - August 2021

- Managed IT operations, supporting electronic medical records systems for over a wide array of doctors, nurses, and administrators.
- Administered network security measures, including VPNs, VLANs, and compliance with HIPAA protocols.
- Spearheaded the development of a web application for employee onboarding and was recognized as Employee of the Month in November 2019.

Pampa Independent School District, Pampa, TX

District Technology Specialist

August 2014 - October 2017

- Oversaw technology support for 3,000 users and maintained 7,000 devices across multiple platforms.

- Led the deployment of the AirWatch MDM and established a Mac OS X Server in a predominantly Windows environment.
-

Education & Technical Skills

Southern New Hampshire University

Associate of Science - AS, Computer Science · (2021 - 2023)

Language -	Ruby, JavaScript, Python, Go (<i>very strong knowledge</i>), Bash
Frameworks/Tools -	Ruby on Rails, Vue, SaSS, MVC, Nginx, PostgreSQL, Git
Systems -	Linux, macOS, Windows, ChromeOS, BSD
Networking -	DNS, CDN, VPN, VLAN
Database -	Snowflake, MongoDB, PostgreSQL
Ticketing/Organizational -	Salesforce, JIRA, Confluence
Machine Learning/AI -	MCP, Gemini, Ollama, Qwen
Others -	BugSnag, DataDog, Hyper-V, ESXi, LVM, DigitalOcean
